

## Artificial Sweeteners

The world market for artificial sweeteners is continuously growing. Acesulfame K is a well-established product in this segment. Due to its elevated temperature stability, good shelf life and excellent mixing behavior it is widely used as a sugar substitute in food and beverages, cosmetic and pharmaceutical industries.

The production process of Acesulfame is sophisticated and needs a lot of deep know-how to reach a stable production with good quality and high yield. The necessary off-site facilities to minimize environmental impact and ensure a reliable and economical raw material supply require a deep process understanding and excellent engineering.

**ENIGA** has this know-how. Our staff has gained many years of experience in the production of Acesulfame K. Based on this knowledge **ENIGA** offers:

- ✦ Feasibility Studies
- ✦ Technology Consulting
- ✦ Conceptual Engineering
- ✦ Basic Engineering
- ✦ Project Management for design, construction, commissioning and start-up
- ✦ Capacity enhancement and debottlenecking
- ✦ Reduction of environmental impact
- ✦ Quality Improvement
- ✦ Purchasing of special equipment
